

# battery recycling

Middletown recycles several types of batteries, including lead acid, alkaline, and rechargeable; however, each type must be brought to separate locations for recycling.

- ✿ **Lead acid batteries:** Recycling Center at 185 Johnson St.
- ✿ **Alkaline batteries:** Public Works at City Hall at 245 deKoven Dr.
- ✿ **Rechargeable batteries:** The City does not have a program for rechargeable batteries, but they can be brought to the locations on the right for recycling. For information about the rechargeable battery-recycling program, go to [www.call2recycle.org](http://www.call2recycle.org).
